MAVERIK HTF[®] COMMERCIAL SWEEP

MAVERIK HTF[®]
SINGLE PASS. SWEEP TWICE.

Single Pass. Swept Twice.

Welcome to a new era in bin cleanup—the Maverik HTF[®] commercial grain sweep.

This is patent-pending, revolutionary engineering that sets new standards with:

- Hydraulic twin flow
- True zero entry drive system
- Pure hydraulically driven product
- Full retrofit capabilities
- Up to 15K bph capacity
- Streamlined geometry

So whatever the conditions, in even the toughest commodities, the Maverik HTF sweep powers through like no other. For superior cleanup, unmatched efficiency and unbeatable performance.

We're taking it to the next level, why don't you join us?

Patent
Pending!

Welcome to a new era in bin cleanup.

MAVERIKHTF®
SINGLE PASS. SWEEP TWICE.

True Zero Entry Drive System

The Maverik HTF® delivers two sweeps in a single pass, with two powerful 12" hydraulic augers and a hydraulic positive drive system that power through the toughest commodities out there.

Advanced variable speed technology means the system automatically controls the sweep, advancing and regressing with "avalanches." It matches reclaim conveyor speed, speeding up and slowing down as needed to prevent choking or bogging down.

As cleanup progresses, the intuitive Maverik HTF increases speed in the second half of the pass, moving as fast as the reclaim will allow to optimize time and productivity.

Simply put, this sweep pulls through time after time, so you don't have to enter a bin. Maximizing OSHA compliance and topping out efficiency and performance.

Pure Hydraulically Driven Product

All hydraulically powered, including both augers and the drive system, the Maverik HTF features hoses that run internally through the shell in a patent-pending design for maximum protection in the high intensity bin environment.

It also offers the flexibility to accept food grade oil, helping protect product viability and salability.

Every Maverik HTF comes equipped with our revolutionary Commercial Grade HYDRA-KOOL Hydraulic Cooler to keep oil temperature down, reduce wear on hoses and bearings and extend system run time.

Plus, this sweep offers both electric and diesel power options, with a convenient mobile power unit that lets you easily move from location to location to maximize efficiencies on multiple bin sites.

Pure Retrofit Capabilities

Fully retrofit capable, the Maverik HTF fits through any 24" diameter standard bin door and works with all standard sump sizes, plus accepts minimal size sumps.

For added versatility and adaptability, it offers the unique ability to match reclaim capacity up to 15,000 bph, plus variable output capability to match reclaim capacity.

Streamlined Geometry

Designed for easy cleanoff and engineered for maximum strength and durability, the Maverik HTF™ maximizes grain flow and cleanliness. Totally smooth, with no sharp edges, odd angles or awkward nooks to catch wayward grain or chaff, this full bin diameter sweep's sleek patent-pending design keeps it working even when others can't.

Added to that, it's laser fabricated for maximum precision—we built it specifically with easy fit-up and easy installation in mind. Standard auger flighting is 3/16" at the edge and 3/8" at the shaft; for hard-to-move commodities, choose more aggressive flighting. A tough powder coated paint finish gives it enhanced durability in tough conditions.
