UPGRADING TO INTUI-DRY® DRYER CONTROL

Taking the best of Quantum® Control and making grain drying even better.

The mechanical components of grain dryers can last decades. But like any high-tech system, the software components are always changing and improving. That's why many owners of Brock grain dryers are upgrading to the INTUI-DRY® Dryer Control.

Easier to navigate

An easy-to-use 15.6-inch touch-screen provides intuitive management of all aspects of dryer operation. Full color graphs outline both wet and dry moisture percentages, and track historical trends.

Easier to maintain

From the solid-state components to the all-new software system, the INTUI-DRY dryer management system is easier to maintain. Many diagnostics and software updates can be done remotely through a web-based connection. INTUI-DRY Control also has quick connectors and fewer components for easy service.

Web-based monitoring and control

Web-based monitoring with INTUI-DRY Control gives enhanced remote access through a personal computer, smartphone or tablet anytime, nearly anywhere. You can check drying parameters in real time, view dryer settings, receive text alerts when a dryer alarm occurs, and shut down the dryer remotely.

Manual control backup

If the Quantum Control ever goes down, you may have to wait for a repair call to continue drying. INTUI-DRY Controls are backed up with a RELIA-DRY® panel mounted basic control system so you always have a way to keep working.

Upgrading to INTUI-DRY® Dryer Control

Seamless upgrade process

Your Brock dealer will take care of all the details when upgrading your Quantum Dryer Control to INTUI-DRY Control. They will even transfer existing dryer settings so you can continue drying quickly, with minimal disruption to your operation.

Available exclusively with Brock grain dryers

INTUI-DRY Dryer Control is available on all BROCK® Commercial Tower Dryers, MEYER ENERGY MISER® Tower Dryers and BROCK® SUPERB ENERGY MISER® Low-Profile SQ Series Dryers. It's yet another reason that Brock grain dryers are the best choice for commercial and on-farm grain operations.
