

It's a great thing when a plan comes together.

— BROCK SOLID® —

Safeguarding Your Grain[®] Since 1957

Every farmer knows that you need the right inputs to grow successful crops. Brock uses the same mindset to build reliable grain storage, handling, drying & conditioning, and structural systems. That's why we are constantly adding new thinking and new innovations to our product line to help farmers and commercial operations safeguard their grain.

Since 1957, Brock has a long tradition of developing industry-leading products and a reputation for delivering

Brock Solid[®] reliability and durability. Brock Solid means

your bins, dryers and structures stand up to anything nature can dish out. Brock Solid means you can get answers to your questions when you need them. Brock Solid means you can count on your grain systems day in and day out — and for future generations.

As part of the CTB, Inc. family of companies, Brock Grain Systems is *Helping to Feed a Hungry World.[®]*

Storage

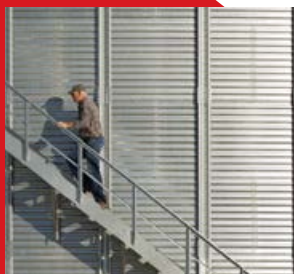

You work hard for every harvest. Protect every kernel.

The grain you store represents hours of work and commitment. That's why Brock helps you protect every harvest with a **full line of on-farm and commercial grain bins** with capacities up to 1,939,574 bushels (64,480 cubic meters). EVEREST® Grain Bins offer the tallest eave heights in the industry along with inventive changes to structures and anchors to improve performance and durability.

Innovative grain bin accessories also make your job easier. Brock's TRI-CORR® Aeration Floor provides for easy bin cleanout. Our Roof Eave Vent System eliminates roof cuts and is self-cleaning. LATCH-LOCK® Bin Entry Doors give you safe, walk-through access with no tools required. SHUR-STEP® Bin Stairs let you check grain and equipment without climbing a ladder. Mid-Roof and Eave Walkarounds protect the safety of your employees and improve access for maintenance. And our groundbreaking

EVERLOC® Roof Mount System streamlines the connection of catwalks and conveyors.

Brock's fans and heaters fit perfectly with BROCK® Bin Systems and help you protect

stored grain. Our on-farm **power sweeps and commercial sweeps** are built for safety and durability. For **temporary grain storage**, you can't beat Brock's LeMar® range of bunker storage walls, center air and fill systems, drive-over conveyors, and grain transport conveyors.

Drying & Conditioning

Drying grain doesn't cost money. It makes money.

Whether you are a farmer looking for ways to reduce your drying expenses or a commercial

operation that makes revenue providing drying services, Brock has a **full range of innovative dryer solutions** to meet your needs.

All grain dryers don't remove moisture from grain in the same way. There are major differences in how consistently, accurately and efficiently they get the job done.

At Brock, we have built the **latest grain conditioning technologies** into our SUPERB ENERGY MISER® SQ Series

Dryers, our MEYER ENERGY MISER® Tower Dryers, and our Brock Commercial Tower Dryers. The Brock VECTOR™ ENERGY MISER® Mixed Flow Dryer is the most recent addition to our product line.

Brock gives you more ways to add value to your grain and improve its marketability.

Our **EVENTFLO® Dryer Unloading System** provides uniform, gentle handling of grain. The advanced **INTUI-DRY® Dryer Controller** has an intuitive user interface with mobile monitoring and

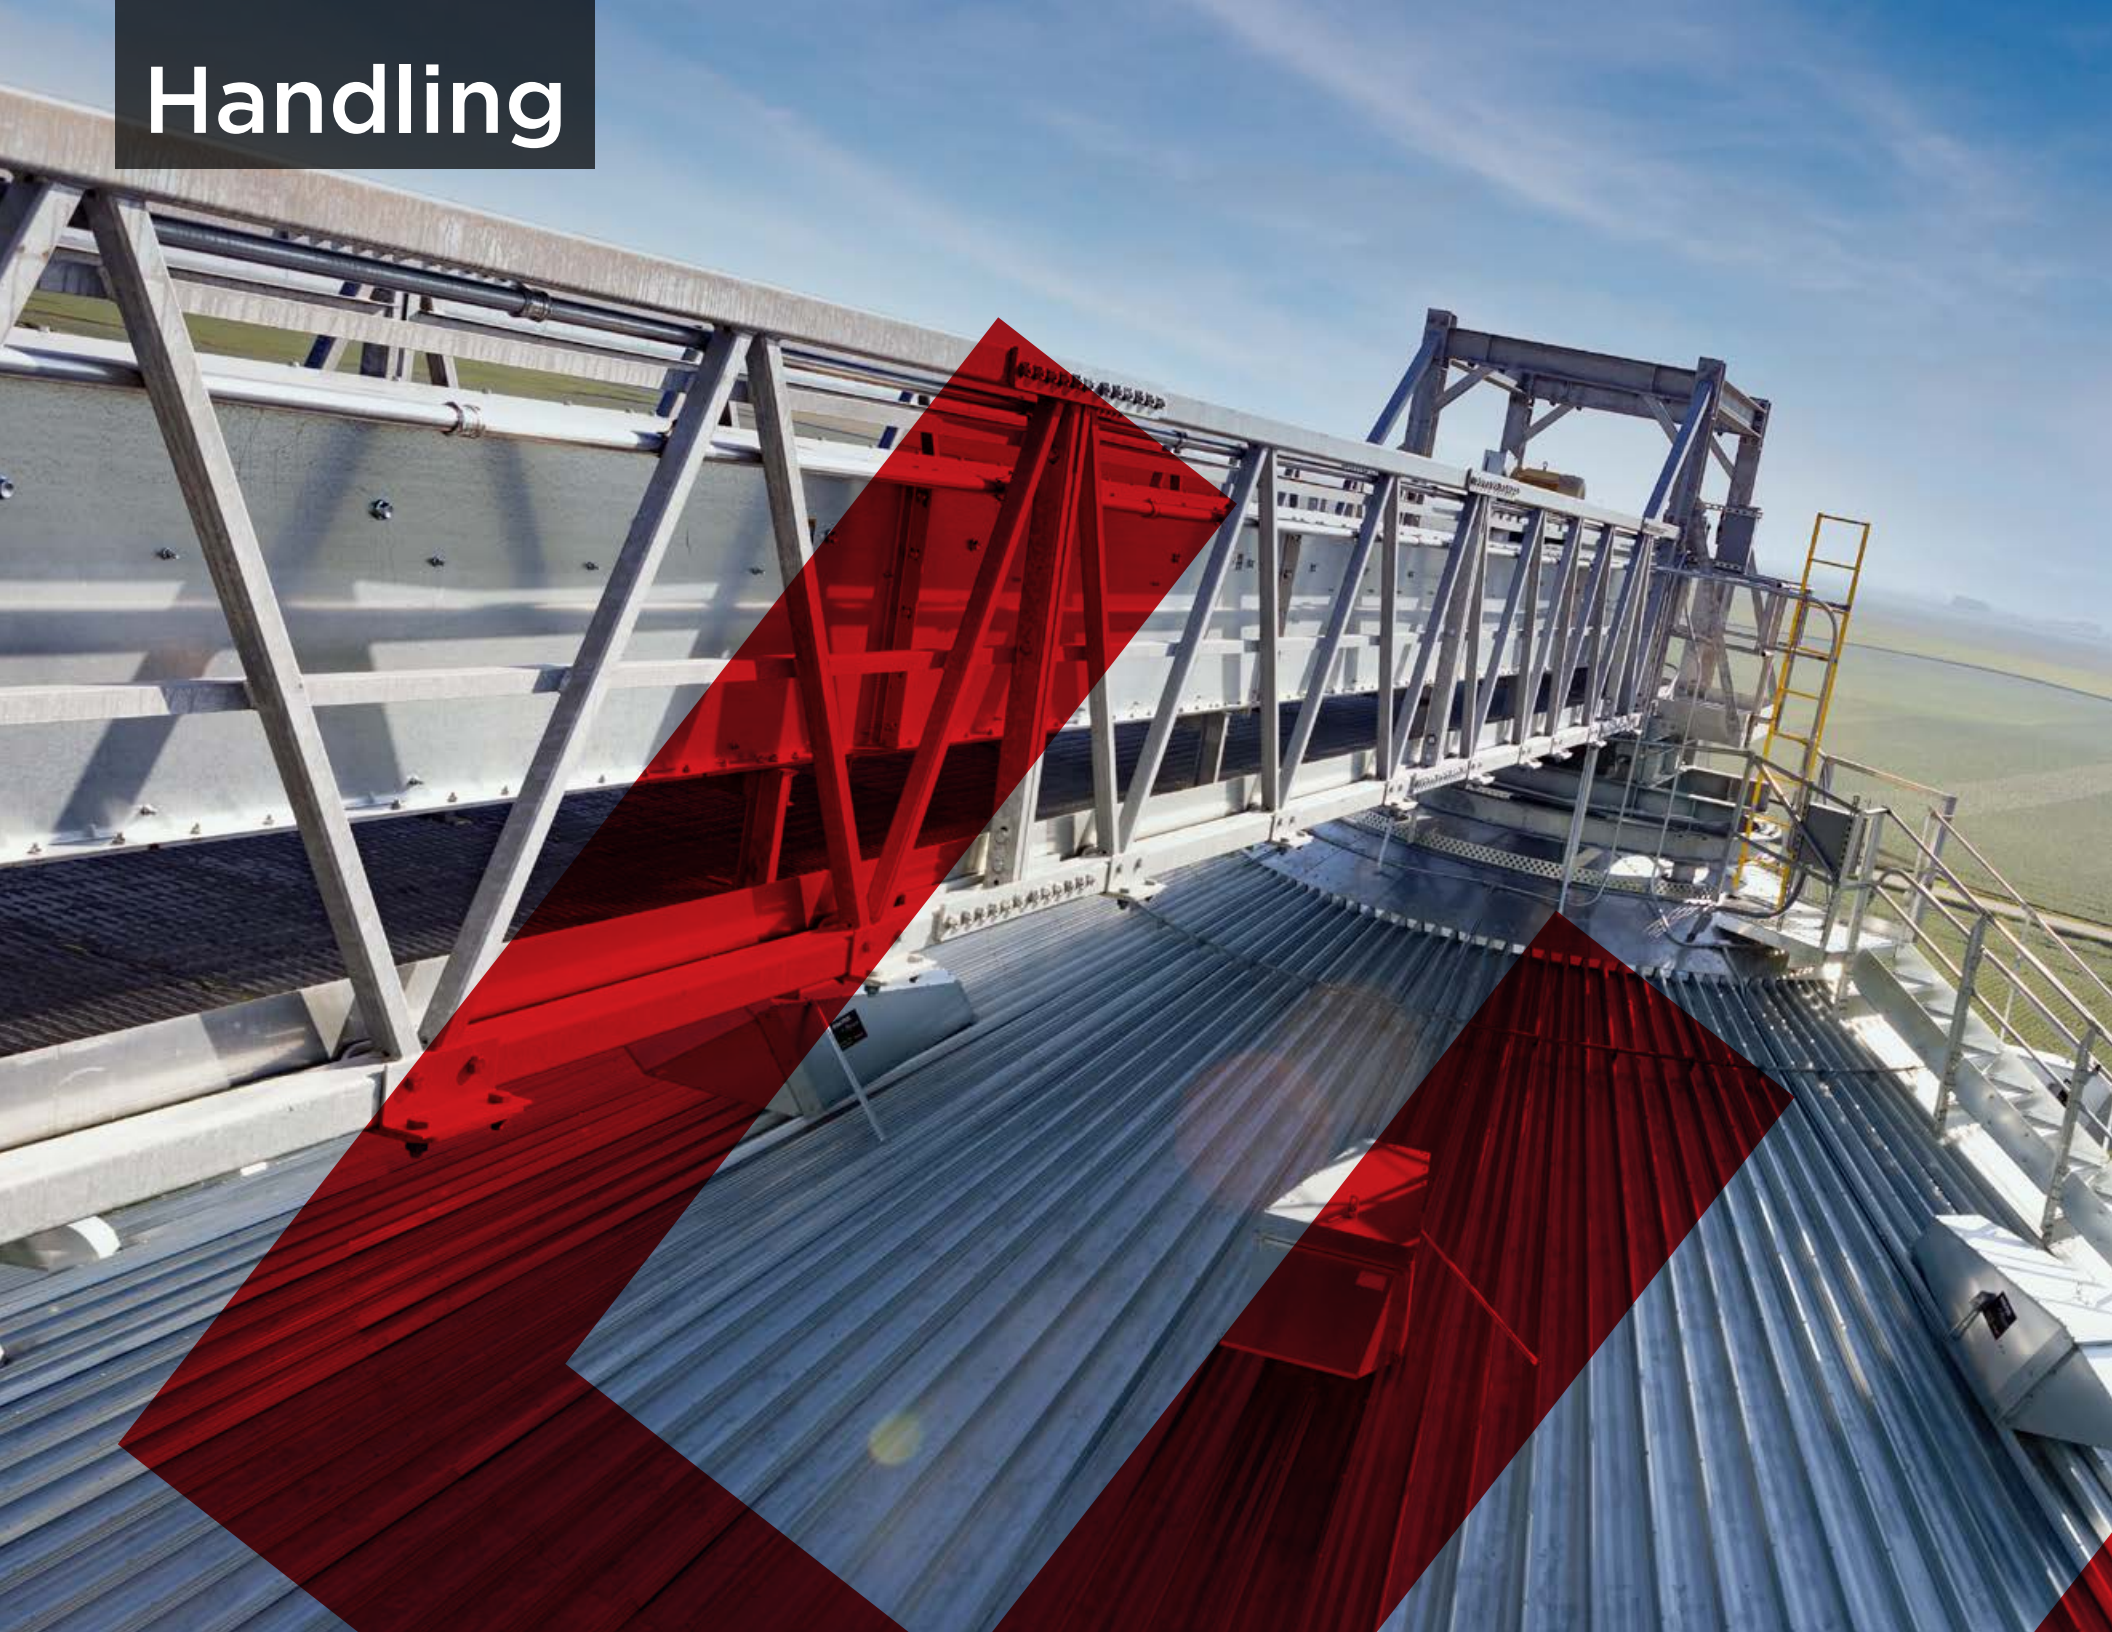

control. Our

TrueGrain™ Moisture Sensor System with Parallel Sensing Technology™

isolates grain moisture measurements for ultimate accuracy.

Handling

Move grain the same way you farm. With care and purpose.

So, you have another record harvest. How are you going to move all that grain easily and efficiently? Brock provides **wide-ranging grain handling solutions** that protect your grain assets and make your life easier.

Build a complete handling system starting with bucket elevators that are **designed to last**. Grain distributors in flat back, full round, and swing configurations. GrainDrive™ Series Horizontal and Curved Incline Drag Conveyors feature **10° angled flights** to keep the chain from riding up on the grain.

GrainDrive™ T1000 Tube Conveyors fit a middle role where you need **more capacity and speed** than a standard auger, while offering lower overall cost and steeper inclines than a drag conveyor. For higher volumes, Brock Enclosed Roller-Belt Conveyors provide **gentle and efficient grain conveying**.

We don't rest on our successes. Brock is always looking for **new ways to improve** your experience with grain handling. That's why

we go the extra mile by welding our bucket elevator flanges on the inside and outside to give you enhanced durability and performance.

Structures

Building the right connections. Without forgetting future expansion.

It's easy to overlook the structures that support your grain storage, handling, and drying systems. They stand quietly every day,

doing one of the most important jobs on your farm or commercial operation. That's why you should

think long and hard when choosing towers and catwalks. You have too much invested in your system to depend on anything less than the quality and durability you get with Brock structures.

Brock's LeMar® Towers offer a wide range of sizes and customized configurations to make nearly any tower structure you need a reality. The patented LeMar design utilizes

innovative **slot and tab connections** for **easy assembly** and precision consistency, resulting in **exceptional connection strength**.

Brock offers two styles of standard LeMar Catwalks, including handrail trusses and walk-through trusses. Our **experienced in-house design and engineering team** can also build any custom configuration your operation needs.

Support

Call them dealers, millwrights, or contractors. Just make sure you call them.

The most important component in your Brock grain system isn't made of steel. It's your local Brock dealer.

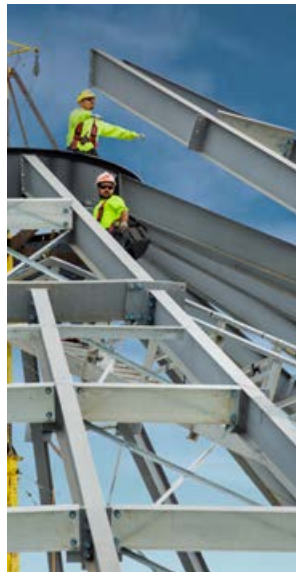

Independent **Brock dealers** **earn your trust** by standing behind every part of the grain systems they

sell. So, you know who to call if you ever need service or support. Or if you just want to talk to someone who knows a thing or two about moving and storing grain.

Brock dealers spend every day helping you keep your grain handling operation moving. They have **thousands of hours of experience**

under their belts. So, when they recommend equipment, you know you are getting the right solution to protect your grain and get it where it needs to go.

Your local Brock dealer is your best source for **designing and installing** grain systems. They know what works and what doesn't. As your investments in grain storage, handling and drying equipment get

larger, it's more important than ever to get the right planning advice upfront to make everything run smoothly.

Promise

It's a great thing
when a plan comes together.

BROCKTM

OneBrockTM means that Brock products are designed to **work together seamlessly**.

No third-party solutions are required for connecting grain storage, handling, drying

& conditioning, and structure equipment.

All Brock components are **pre-engineered** and manufactured to complement each other, ensuring **installation simplicity** and

reduces your risk and lowers your cost for the long term.

Brock thinks through the details of your grain storage, handling, structures, and conditioning systems. That means Brock

trouble-free performance. You not only get improved fit, finish and safety, Brock Smart Design also

grain systems **go together faster** and with more precision. They operate flawlessly and efficiently. And they last for years and years. That's not just smart, **that's Brock Solid.[®]**
